Lock Function

To enable or disable lock function press ✓ and ↰ together.

Exiting Energy Mode

To enter or exit energy mode, press and hold the ↰ button.

iT500 - Receiver PAIRING & LIGHT CODES

## Pairing the receiver with the iT500 thermostat

It is unlikely, but if you are experiencing problems, you may need to re-pair your boiler receiver with the iT500. In this event, please follow steps 1-3 below:

1 Using a paper clip, insert into the hole marked SYNC at the bottom of the iT500RX Receiver.

2 The bottom switch will show a constant red light when the iT500RX Receiver is ready to pair.

3

⚙ + ↰

4

✓ →

5

6 When the iT500RX Receiver and the iT500 Thermostat are powered and paired then the light will go green.

What do the lights mean?

The lights on the front of the receiver will change from time to time.

A flashing blue light indicates a call from the iT500 thermostat to the receiver for heat/hot water.

A constant orange light indicates that the receiver has lost RF signal and entered FAILSAFE MODE. In this event, your system will be switched on for 4 minutes, then off for 11 minutes. If you want to disable FAILSAFE MODE when RF link has been lost then move the slide switch on the receiver to either the manual or off position.

If you are having problems or wanting more information on your iT500 system, please visit our website or call our technical helpline.
